Anthony Fait

AI Software Engineer - Python, LangChain, MCP, Generative AI, Agentic AI, LLM

anthonyfait.digital@gmail.com (707) 221-5444 Lafayette, Oregon

Summary

AI Software Engineer specializing in Python, LLM application development, LangChain/LangGraph, MCP tooling, and agentic automation systems. Proven experience architecting production-grade AI platforms, building secure and scalable backends, and integrating LLMs, RAG pipelines, vector databases, and cloud-native infrastructure. Delivered AI/ML solutions for healthcare, fintech, and enterprise SaaS that improved operational efficiency by up to 70%, supported 50K+ users, and passed HIPAA/SOC 2 audits. Strong focus on Generative AI, NLP, retrieval systems, model orchestration, and enterprise-grade compliance. Additional focus includes end-to-end AI solution architecture, AI system design, RAG architectures, agent-based systems, inference pipelines, platform and tooling selection, secure distributed systems, AI governance by design, operational readiness, observability, monitoring, logging across production AI workloads.

Skills

AI / ML
LangChain, LangGraph, CrewAI, Agentic AI, MCP Tools/Servers, RAG, LlamaIndex, Azure AI, Azure AI Foundry, Prompt Engineering, OpenAI API, Transformers (BERT, RoBERTa), LLM Orchestration, Fine-Tuning, Embeddings, Vector Search, NLP Pipelines, Classification, Semantic Search, Model Evaluation, TensorFlow, PyTorch, Scikit-learn, AI Solution Architecture, Model Interaction Patterns, Inference Architecture, Production AI System Design

Frontend
React, Next.js, Vue, TypeScript, Tailwind CSS, Design Systems, Responsive Design, Component Architecture, SaaS UI/UX, Accessibility (WCAG 2.1)

Backend
Python, FastAPI, Django, Flask, Node.js, NestJS, C#, .Net, gRPC, RESTful APIs, Firebase Auth, OAuth2/JWT, Microservices, Event-Driven Architecture, Async Processing, Serverless (AWS Lambda/Cloud Functions), API Integration

Cloud & DevOps
AWS, GCP, Kubernetes, Serverless Architectures, API Gateways, Service-to-Service Authentication, Infrastructure as Code, High Availability & Resiliency Design, Cost Optimization, High Availability Architecture, Resiliency Design, Disaster Recovery, PowerShell, Latency Optimization, Cost Tradeoff Analysis, Observability & Monitoring

Data & Security
SQL/NoSQL, Firestore, ETL Pipelines, Data Lakes, Pinecone, Vector DB, Encryption (TLS/At-Rest), HIPAA Compliance, SOC 2 Controls, RBAC, Access Auditing, HL7/FHIR Data, Real-Time Streams (IoT), AI Security & Governance, Policy Enforcement, Auditability, Secrets Management, Identity & Service-to-Service Authentication

Other
QR/Barcode Systems, WCAG 2.1, Agile/Scrum, Public Trust Clearance

Professional Experience

AI & Backend Engineer, *SprintiQ Inc.* 01/2025 – 02/2026
Colorado, United States

- Engineered Python-based LLM/NLP microservices that parsed and classified high-volume financial documents using Transformer models (BERT/RoBERTa), improving document categorization accuracy by 28%.
- Implemented RAG pipelines and retrieval layers with LangChain, LangGraph and CrewAI to power enterprise-facing AI assistants and automated financial insights.
- Designed and optimized Firebase + Cloud Functions backend handling 50,000+ MAU, ensuring consistent sub-200ms response times.
- Integrated and evaluated MCP-compatible tools and API-based services within LangChain-driven workflows, validating request/response behavior and schema alignment.
- Tested and reviewed internal APIs and third-party integrations to ensure reliability, documentation accuracy, and consistent behavior across environments.
- Architected and deployed agentic AI solutions using Azure AI Foundry and AKS, integrating enterprise APIs and Microsoft Copilot connectors within secure, multi-tenant environments.
- Built end-to-end CI/CD with GitHub Actions, vert Docker, and automated QA checks, reducing deployment failures by 35%.
- Built and maintained reusable React components using hooks and state management to develop a fraud detection analytics dashboard, improving analyst review time by 20%.
- Improved observability and reliability by adding structured logging, metrics, and automated exception tracking.

AI Solution Engineer, *Underguard* 09/2022 – 11/2024
Florida, United States

- Led architecture and development of a Generative AI SaaS platform using Python, LangChain and custom agent tools, reducing document review speeds for healthcare clients by 70%.
- Developed encrypted FastAPI APIs and HIPAA-compliant microservices utilizing Firebase Auth, SQL/NoSQL storage, and PHI-safe data flows.
- Implemented YAML-based CI/CD pipelines and PowerShell automation scripts to support containerized AI workloads deployed on Azure Kubernetes Service (AKS).
- Owned architectural decisions for AI systems including RAG design, agent-based workflows, platform selection, security, governance, and production readiness.
- Engineered RAG and NLP pipelines with real-time ingestion, embeddings, and vector search, significantly improving extraction accuracy and response quality.
- Delivered WCAG 2.1-compliant UIs in React/Next.js, improving accessibility and usability metrics by 40%.

- Integrated IoT wearable data into ML systems using Firestore + Cloud Functions, enabling real-time alerts, anomaly detection, and predictive modeling.

AI Full-Stack Developer, *BigBear Inc.* 07/2020 – 08/2022
Columbus, United States

- Built a HIPAA-compliant patient engagement and clinical automation platform using FastAPI, Firebase Auth, React, and secure backend workflows.
- Implemented transformer-based clinical note summarization and prototypes using Hugging Face models, cutting clinician documentation review times significantly.
- Designed and enforced enterprise security features including RBAC, audit trails, encryption, session security, and compliance reporting, enabling successful HIPAA + SOC 2 audits.
- Designed AI systems with embedded security, governance, auditability, high availability, and disaster recovery considerations.
- Automated ingestion of HL7/FHIR healthcare datasets into Pinecone Vector DB, enabling semantic retrieval across patient histories and EHR data.
- Developed integration services in C#/.NET to connect enterprise systems with Python-based AI orchestration layers.
- Produced technical documentation and conducted onboarding workshops for 15+ healthcare partners, improving adoption and reducing support overhead.

Full-Stack Developer, *Rakuten* 08/2018 – 12/2019
Tokyo, Japan

- Built high-scale full-stack systems with Django APIs and React/Next.js frontends for government and enterprise clients across logistics and education.
- Developed a real-time QR-based inventory tracking system with WebSockets, role-based dashboards, and automated data reconciliation, cutting warehouse reconciliation time by 60%.
- Containerized applications with Docker and implemented GitLab CI workflows, increasing deployment reliability across environments.
- Designed OAuth2 + MFA authentication flows handling 10,000+ users while maintaining high security and low friction.
- Led accessibility and performance improvements, implementing a11y testing and WCAG AA standards across multiple client projects.

Education

Bachelor's degree, Computer Science, *Nagoya University* 2014 – 2018
